

To Do App Project Design Document

INT3052: Cross platform apps

Jongjet W, ID 7256

Summary of the application

This simple to-do application is the application that offers the user to manage their tasks which they have to complete. This application is designed most simple and minimal for the user can understand the application's user interface easily and can afford the great user experience. The application will aim at the to-do task management. Users can create the task, tick the checkbox for task finishing, and also delete finished tasks from the list. The application also offers the camera for taking the picture which the user can use for the reference in the future.

Audience

Everyone can use this application for their daily life management. The simple task group such as a list for shopping, the household chores, etc. even though moderate tasks such as assignment at the college can also be achieved with this application function.

The experience

The user can simply create the task and manage the task which is tick the checkbox when the task is done and delete the done task from the list.

How the application will be used

Example 1

User can use it list for the groceries which have to buy when they go to the grocery store. When they put the thing that they want to the basket, they can tick the checkbox for that item which represents they got it already.

Example 2

For college students, when they've got the assignment from the professors, they can list it on the application. Sometimes it might have a picture or document which they have to do a quick snapshot for the references, they can use the camera function to take a shot quickly.

Main Features

1. The task can be added by type at the text box at the bottom then press then click the add button to send it to the list.
2. When the task was done, the checkbox in front of the task can be ticked then the task text will be marked with strikethrough design.
3. The clear task button can be pressed to delete the done tasks from the list.
4. The take a photo button can be pressed to lead to the camera page for taking a photo function.
